

Wikipedia interest: Intermittent fasting

English (en) · German (de) · French (fr) · Spanish (es) · Italian (it) · Ukrainian (uk) · Czech (cs) · Russian (ru) | 2024-09 to 2026-08 | Wikidata Q1666254: a diet that cycles between a period of fasting and non-fasting

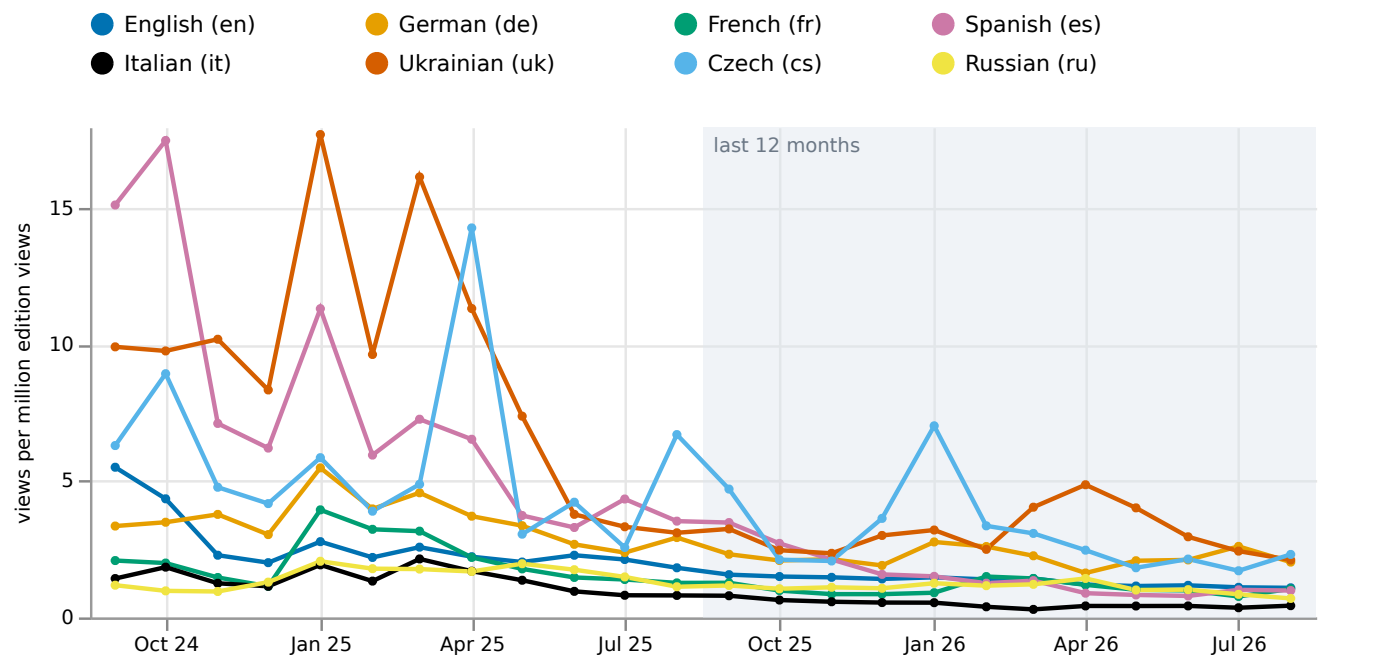

Question: Compare the growth of interest in intermittent fasting in Polish and Czech Wikipedia over the last two years, plus other major languages.

ANSWER

Interest in intermittent fasting is declining in every language we checked. The steepest drops are Spanish (-84%) and Ukrainian (-76%), and even after adjusting for lower overall Wikipedia traffic the share of views fell 80% and 68%. English (-54%) and German (-43%) are declining more slowly. Polish Wikipedia has no article on the topic at all. Because the declines are broad-based and consistent across languages, this looks like a shift in how people research diets rather than a single market losing interest; treat Wikipedia as a weak signal here and validate with search trends before investing further in this topic.

Monthly interest, normalized by the size of each language edition

Shaded: the most recent 12 months, compared with the 12 before them.

Language / article	Views/ month	Per million	Change YoY	Share change	Direction	Confidence
English: Intermittent fasting	9,027	1.3	−54%	−50%	Declining	High
German: Intermittierendes Fasten	1,563	2.2	−43%	−39%	Declining	High
French: Jeûne intermittent	633	1.1	−55%	−50%	Declining	High
Spanish: Ayuno intermitente	861	1.6	−84%	−80%	Declining	High
Italian: Digiuno intermittente	188	0.5	−70%	−65%	Declining	Medium
Ukrainian: Інтервальне голодування	175	3.1	−76%	−68%	Declining	Medium
Czech: Přerušovaný půst	183	3.1	−54%	−47%	Declining	Medium
Russian: Периодическое голодание	714	1.1	−43%	−27%	Declining	High

No article on this topic in: Polish (pl). Low coverage there, which is itself a signal.

Why confidence is not higher

- Italian: Modest volume (~188 views/month).
- Ukrainian: Modest volume (~175 views/month).
- Czech: Modest volume (~183 views/month).

Method: human pageviews (bots excluded) of the article linked to the same Wikidata item in each language. Change = last 12 months vs the 12 before (cancels seasonality). Share change = the same, as a share of all views in that language edition (removes Wikipedia-wide traffic shifts). Per million = article views per million edition views. Limits: pageviews reflect curiosity, not willingness to pay; one article stands in for a topic; a language is not a country. Source: Wikimedia Pageviews API, Wikidata.
